## Pressurized Irrigation

Water from the pressurized irrigation reservoir which feeds our pressurized irrigation or secondary water system is a blend of surface and well water from a variety of sources. Our pressurized irrigation water is screened but not treated in any way. We recommend that residents connected to pressurized irrigation use a filter on their connection and check and clean their filter monthly during the summer months.

If you have connected or are planning on connecting to the pressurized irrigation system, be aware that you are required to have your connection inspected prior to use. Mapleton City requires you to have a shut off valve on your connection as you are not allowed to turn the city valve on or off.

Many questions on pressurized irrigation / filters/ or connecting can be answered by going to [www.mapleton.org](http://www.mapleton.org) under the Public Works Department. You can contact Public Works at 801-489-6253.
